PYP 3
English Asynchronous Task

Name: _____

Date: _____

Learning Objective: To strengthen comprehension skills and use grammar appropriately

1. Read the following passage and answer the questions below.

The world around you has hills, trees, homes and buildings. Imagine looking down at your town or Earth from space. From space, you could see and photograph your entire country.

The International Space Station is one satellite that has cameras. Images taken by orbiting cameras track changes that happen to Earth over time. These images record pollution damage, climate change, and changes to land surfaces.

Not all areas have storm warning systems to let people know if a dangerous storm is coming in time for them to escape the storm's path. Images from orbiting satellites help scientists predict where a storm will go.

Images from space can even show changes to land areas, such as deforestation, the loss of forests, soil erosion, and the wearing away of land by wind or water.

Images from space can show where air or water is being polluted. This information can help people nearby take preventive measures. Overcrowded cities in China have some of the world's dirtiest air quality due to many causes, one being the burning of coal for power. Satellite images can reveal where air pollution originates and even show it drifting to other countries.

1) What do orbiting cameras help scientists do?

- a) Build homes
- b) Track changes on Earth
- c) Stop storms
- d) Grow forests

2) Why are satellite images helpful during storms?

- a) They stop the storm
- b) They warn people in all areas
- c) They help predict where the storm will go
- d) They clean polluted air

3) Name two changes to Earth that satellite images can record.

4) What is deforestation?

5) How can images from space benefit communities affected by pollution?

2. What preventive measures can you take to combat the issue of air pollution? Explain in detail.

[illegible]

Let's Reflect:

I used to Think	Now I think
(What did you think about space images or satellites?)	(What new understanding do you have now?)
